“Caduceus” — University’s Medical Journal

The China Mail

11th June 1923

The May number of “The Caduceus” the journal of the Hongkong University Medical Society is not merely of interest to the members of the very much alive University Medical Society Doctors in embryo many of them but commands attention of others not medically inclined. For instance Dr. C. M. Heanley has a fascinating article on “Some Geological Excursions Around Hongkong” which opens out a new vista to the ordinary lay mind, and should make walking less an exercise and more of a pleasure. “The Distribution of Blood Vessels” by Dr. Sheelshear has also its own distinctive appeal. The Editorial Comment contains notes on the cost of Medical Education concluding with the following forceful observation: — “Let China spend as much on medical education as she does on funerals and the problem is solved?” Very true!
