Two LegCo members-elects disqualified

Causeway Bay Books incident

Co-location bill passed

Public Transport Fare Subsidy Scheme

Caring and Sharing Scheme

Announced the Fugitive Offenders and Mutual Legal Assistance in Criminal Matters Legislation (Amendment) Bill 2019

Lantau Tomorrow Vision (明日大嶼)

Occupy Central leaders sentenced

2019 Anti-Extradition bill protests

How did we assess mental health?

Patient Health Questionnaire (PHQ-9): **Depressive symptoms**

Validated in FAMILY Cohort (Yu X et al 2012)

Total score ≥ 10 : **Probable Depression**

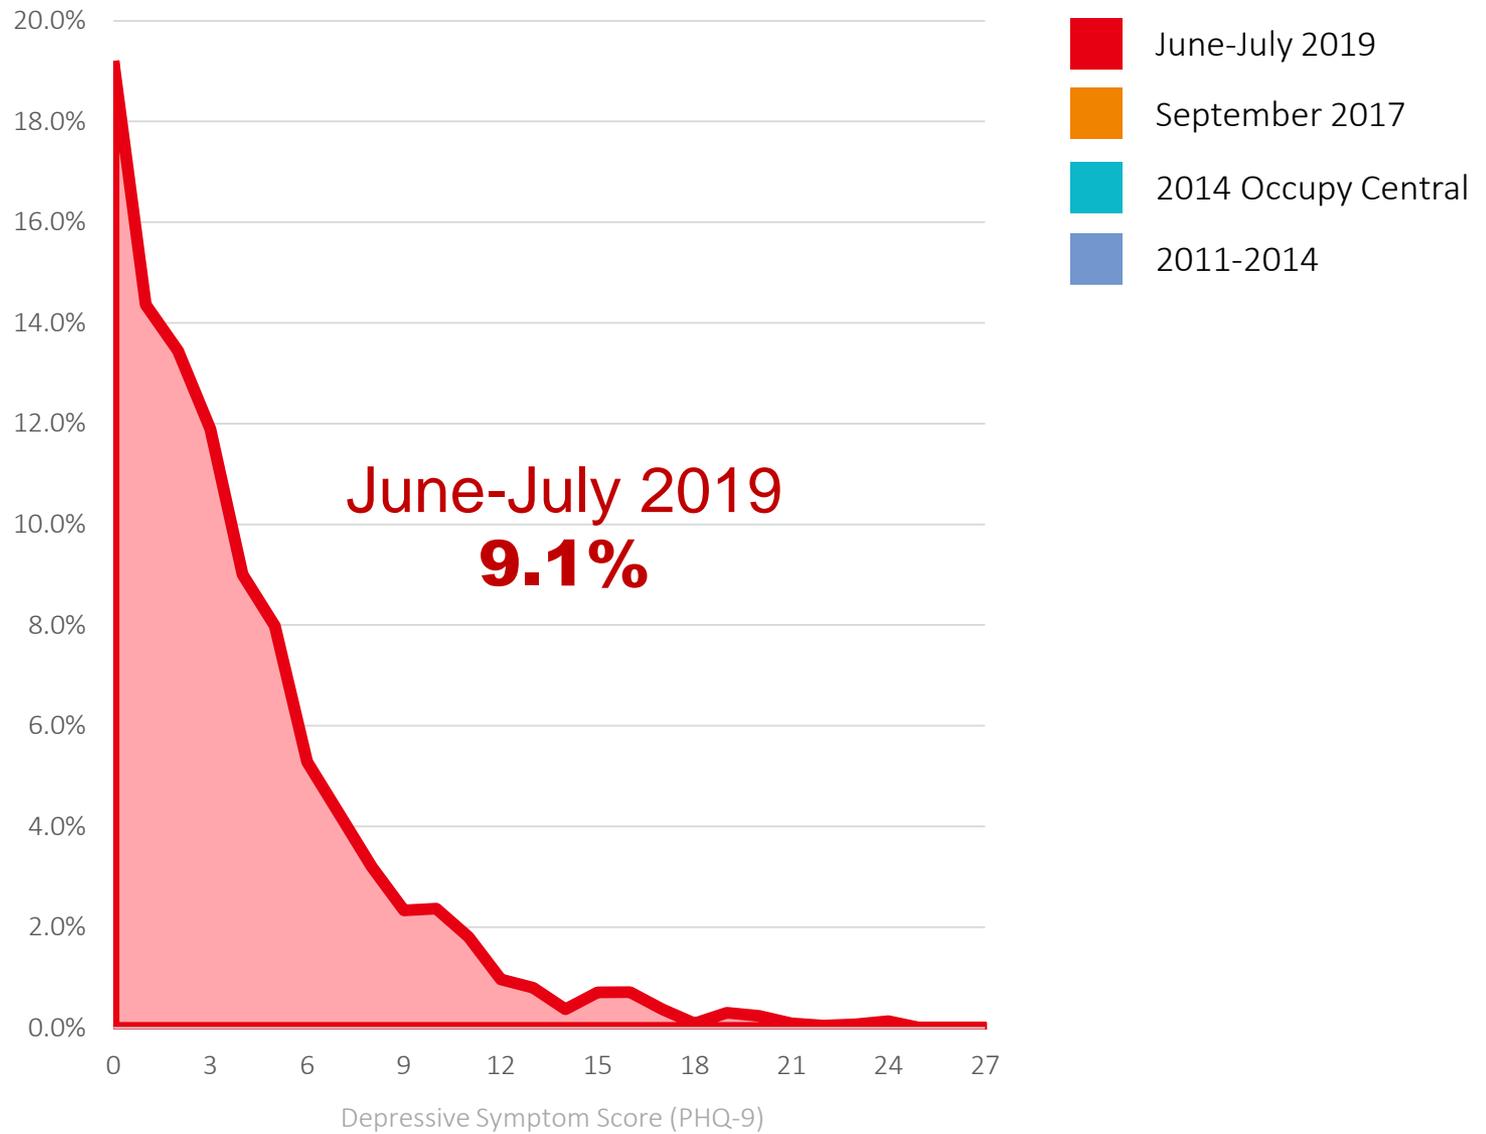

85% sensitivity & 80% specificity for diagnosis of major depression
(meta-analysis by Manea L et al 2012)

PHQ-9 ninth item score ≥ 1 : **Potential Suicidal Ideation**

Probable depression over time

Probable depression by demographics

Demographics		June-July 2019 % Probable depression (95% CI)
Overall		9.1 (7.5, 10.6)
Age		
	20-29	5.7 (2.2, 9.1)
	30-39	7.8 (4.2, 11.4)
	40-49	5.5 (2.6, 8.3)
	50-59	12.0 (8.2, 15.8)
	60 and above	11.5 (8.2, 14.9)
Sex		
	Men	10.7 (8.1, 13.2)
	Women	7.8 (5.8, 9.8)
Education		
	Primary	11.5 (7.6, 15.5)
	Secondary	9.8 (7.4, 12.3)
	Tertiary	6.8 (4.5, 9.1)
Household income		
	Under 10,000	12.9 (8.5, 17.3)
	10,000-19,999	6.5 (3.5, 9.6)
	20,000-39,999	8.9 (5.7, 12.0)
	40,000 and above	4.6 (2.1, 7.2)
	Unknown	13.6 (9.1, 18.2)
Employment status		
	Employed	6.4 (4.7, 8.1)
	Economically Inactive	14.2 (10.9, 17.6)
	Unemployed	7.4 (-1.0, 15.8)

Intra-familial conflicts due to socio-political reasons

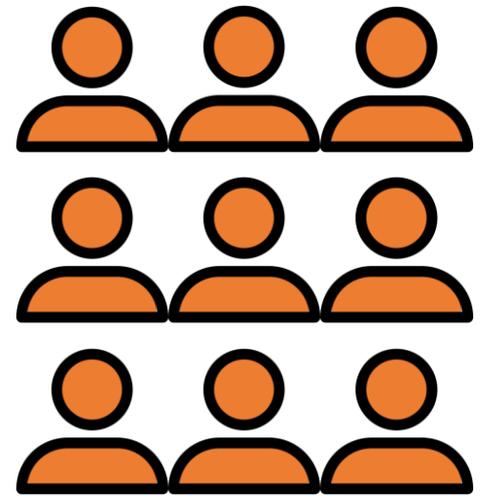

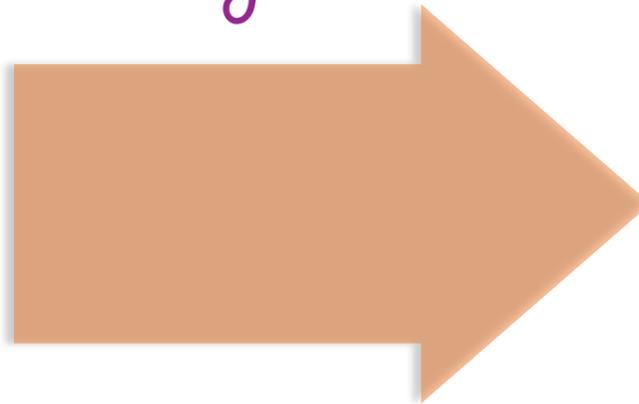

Limitations

Our sample did not include children and youths below the age of 18. This will be addressed in a newly commissioned survey beginning next week, drawing on the FAMILY cohort, Children of 1997 cohort and a de novo sample of randomly chosen youth between 15-25 years old.

Family  愛+人

Take-home Messages

- Health care professionals need to be vigilant about the mental health impact during and indeed long after significant social events, including potential community spillover effects.
- This should translate into carefully hearing out, listening to and heeding the voices of young people as appropriate; while at the same time be on the alert for mental distress in older adults.
- Prior evidence from Occupy Central also cautions against rumination on the news and social media during and after major social upheavals.
- Proper and adequate social support and reducing intra-familial and society-wide socio-political conflicts may mitigate these adverse mental health effects.

Take-home Messages

- Individuals should raise self-awareness of their own and their family's mental state.
- Specifically, people should be vigilant of the emergence of depressive symptoms which include pervasive low mood, diminished motivation, loss of interest, sleeplessness, reduced appetite, negative rumination (e.g. sense of guilt, helplessness, worthlessness and hopelessness), and thoughts or even plans of self-harm.
- Progression or persistence of these symptoms, or impairment in daily, social and/or role functioning may already indicate the presence of a depressive disorder.
- Those who recognize these symptoms should seek help from mental health professionals promptly, and proper treatment is key to preventing undesirable outcomes and to achieving a quick recovery.
