“After SARS: Education and Research Agenda for the Future”
Joint HKU/CUHK/CPU Academic Seminar on July 2, 2003

In a high-density city like Hong Kong, the life of citizens is contiguous on the built environment. The built environment is also affected by the citizens. To make a clean and hygienic environment, the syndrome of sick building has to be resolved.

The problems of existing private building design are studied with respect to health and hygiene. Areas of improvement are thus proposed and recommendations are put forth for improvement of the building, urban design and city planning to achieve a healthy urban built environment in the highly dense city of Hong Kong.
