

***MMPH6146 Health policy and politics***  
**Coordinator: Prof Karen Grépin**

**Course Description:**

This course introduces the core theories of health policy to understand and assess the effectiveness, efficiency, and equity of national or regional health systems. Students are guided through the policy process and learn about the role of policymakers and stakeholders in influencing policy outcomes. The trade-offs that are made in setting priorities in health policy (equity, efficiency, and other outcomes) are discussed. Using these theoretical considerations, students are led through a survey of health system typologies to understand the way in which political economy has influenced the adoption of health policies in select health systems. Students are given the opportunity to make policy recommendations to address a specific health issue by analyzing the causes and consequences of this issue, making arguments as to why it should be on the policy agenda, evaluating potential strategies to address this issue, developing strategies to overcome resistance from opposing stakeholders, and proposing a framework to evaluate the effectiveness of the policy on health and health equity outcomes. Students are taught strategies to advocate for their policy solution. Finally, students are given the opportunity to conduct research on a key health policy issue and debate whether a given policy should be adopted to address it.

**Prerequisite:** None.

**Tutors/TA:** Dr Andrew Park/ Dr Phyu Phyu Thin Zaw/ Ms Baikong Mamid/ Ms Deng Ziru

**Term 1 (Monday)**

**Contact person:** Dr Andrew Park
